System Overview:

AQUILO is a “1-click” .NET based thick-client application which is an add-on interface for the Canadian Cardiac Rehab Registry (CCRR) web based system. The application allows for better security and more rich functionality than would be available via a purely web-based interface.

AQUILO is quickly installed with minimal user interaction required on client machines. Users are prompted when updated versions are available.

AQUILO creates a shortcut in the Start Menu within the Cissec Corporation folder. Program and configuration files are installed to the AQUILO folder, located on the user’s primary system drive.

Supported Client Operating Systems:

Microsoft Windows XP, Windows Vista, Windows 7 (32-bit version tested)

Required Software Components:

Microsoft Internet Explorer 7 or greater installed

Microsoft .NET Framework 3.5 SP1 or greater installed

(AQUILO will prompt the user to install .NET Framework 3.5 if it is not detected on the system)

Hardware Requirements:

Monitor resolution of 1024x768 or greater

High-speed Internet connection

500MB or greater available disk space *(for .NET 3.5 Framework if not already installed)*

Hardware Recommendations:

Intel Core series processor or greater (or AMD equivalent)

1GB RAM or greater

For further information about AQUILO, please consult the AQUILO User Guide document. Technical inquiries may be directed to helpdesk@cissec.com
